The Chair introduced the meeting and went through the agenda.

Members discussed the decision tree for allocating XT ISIN for different types of instruments and agreed to make changes for Others and Referential Instruments.

Members discussed ISIN issuance process for securities and CFIs and agreed to seek further clarification on the CFI assignment process.

Members discussed difficulties identifying issuers for most of the digital tokens in the market and ambiguous definitions of security.

Members agreed that any token that represents a security, must have an ISIN.

Members agreed that there is a difference between security tokens and tokenised securities and process should differentiate the two.

Members agree to review a few different examples of tokens to test the assignment process decision tree.
